transferase) with an acceptor substrate and a sugar nucleotide donor in CC the presence of a test substance under conditions whereby the core 2 CC GleNAc-T produces a reaction product, determining the amount of reaction product, and comparing the amount of reaction product with the amount CC product, and comparing the amount of reaction product with the amount of reaction product in the presence of the test substance indicate that the CC reaction product in the presence of the test substance indicate that the CC methods for preventing or treating cardiomyopathy associated with CC diabetes and hyperglycaemia, and (2) transgenic nonhuman animal whose CC germ cells and somatic cells all contain a DNA construct introduced into the animal or an ancestor of the animal at an embryonic stage, where CC incorporation of the DNA construct into the germ line of the animal CC causes the animal to develop cardiomyopathy similar to that associated with diabetes mellitus and hyperglycaemia. This sequence represents the CC rat DH1 protein which is used to describe the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            may be used to prevent or treat cardiomyopathy associated with diabetes and hyperglycaemia. This method involves reacting core 2 GlcNAc-T (UDP-GlcNAc:Galbetal-3GalNAc-alphak beta-1,6-N-acetylglucosaminyl-

                                                                                                                                                                                                                                                                                                                                                                                                                     AAC98773 to AAC99231 encode the human pancreatic cancer associated CC proteins, called pancreatic cancer antigens, given in AAB54008 to AAB54466. The human pancreatic cancer antigens have cytostatic, cc anabcat466. The human pancreatic cancer antigens have cytostatic, cc queuroprotective, noctropic, immunomodulatory, relaxant, contraceptive, cc gynaecological, cardiant and antiinflammatory activities, and can be used in gene therapy. The polynucleotide and proteins can be used for preventing, treating, or ameliorating a medical condition or in assays cf or diagnosing a pathological condition or a susceptibility to one in a complete. Binding partners to the proteins and the activity of the cc proteins can be identified. The pancreatic cancer antigens can be used to detect, treat or prevent pancreatic disorders, especially cancer. Cc detect, treat or prevent pancreatic disorders, especially cancer. Cc agonists and antagonists to the antigens can be screened for. The pancreatic cancer antigen polynucleotides can be used to design nucleic caid hybridisation probes that can be used in chromosome mapping, linkage can diagnostic methods. The proteins can be used to generate antipodies which are used to purify, detect and target the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to generate antipodies of the used to purify detect and target the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods. The creproductive, gastrointestinal, pulmonary, cardiovascular, renal or proteins used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    detection; diagnosis; identification; cytostatic; neuroprotective; nootropic; immunomodulatory; relaxant; contraceptive; gynaecological; antiinflammatory; cardiant; gene therapy; chromosome mapping; linkage analysis; tissue identification; tissue typing; forensic; neural; immune system; muscular; reproductive; gastrointestinal; pulmonary; cardiovascular; renal; proliferative.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acid that is a pancreatic cancer antigen for preventing, treating, or ameliorating a medical condition, particular pancreatic cancer, or for use in assays for diagnosing a pathological condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 11;

This sequence represents the human core 2 GnT protein (beta-1,6-N-acetylglucosaminyltransferase) which is used to describe the method of the invention.
                                                                                                                                                                                                                                                                                       AAB30298 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

The enzyme is associated with cardiomyopathy in diabetes and hyperglycaemia sufferers. The invention also provides methods for identifying inhibitors of core 2 GlCNAc-T which can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Preventing or treating cardiomyopathy associated with diabetes meilitus and hyperglycemia, comprises administering a substance that inhibits core 2\ N-acetylglucosamine-T activity -

CC The polypeptide can be used to treat diseases and disorders, such as
CC cancer, cardiovascular disorders and inflammatory disorders including
CC asthma, rheumatoid arthritis, inflammatory bowel disease,
CC carter; cardiovascular disorders and inflammatory distress syndrome
CC arteriosclerosis, septic shock, adult respiratory distress syndrome
CC (ARDS) and cancer. Various platelet-mediated pathologies such as
CC (ARDS) and cancer. Various platelet-mediated pathologies such as
CC (Stomach, colon, intesting can also be treated. The polypeptides of
CC (Stomach, colon, intestine, testis) and are elevated in cancer.
CC (Sastrointestinal disorders that may be prevented or treated include
CC ascites, cholelithiaseis, cirrhosis, crohn's disease, diverticulitis
CC and ulcerative colitis. The antibodies may be used in
CC conception and to particular cells and tissues and to specific subcellular
CC localize it to particular cells and tissues and to specific subcellular
CC locations and to quantitate the level of expression.

                         C2GnT, or an active fragment thereof, catalyses the formation of critical branches in O-glycans. cDNAs encoding various glycosyltransferases can be isolated by transient expression of cDNA in recipient cells, e.g. COS-1. COS-1 cells were transfected with a cDNA library, pcDSR alpha-2F1, constructed from poly(A)+ RNA of activated T lymphocytes which express the C2GnT. Transfected cells were selected using MAb T305, which identifies a hexasaccharide on leukosialin. Leukosialin CD43 is an acceptor molecule for C2GnT activity. A plasmid, pcDSR alpha-Leu, which directed expression of the T305 antigen was identified. The CDNA insert was isolated and sequenced. The cDNA encoded the acceptor molecule leukosialin CD43.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence of human core 2 beta 1-6 N-acetylglucosaminyltransferase (

The enzyme is associated with cardiomyopathy in diabetes and hyperglycaemia sufferers. The invention also provides methods for identifying inhibitors of core 2 GlcNAc-T which can be used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        QУ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Poly-A RNA isolated from human PA-1 teratocarcinoma cells was reverse-transcribed and inserted into expression vector pcDNAI. Plasmid DNA was used to transfect CHO-Py-leu cells. Transfected cells were screened using human anti-I antigen antibodies and goat anti-human IgM. Plasmid DNA was analyzed to obtain DNA (given in AAQ89201) encoding I-branching enzyme (AAR71932).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acid encoding I-branching enzyme - used to develop prods. for treating e.g. inflammatory responses, tumours or hypersensitivity reactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; Fig.6; 56pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                  (IGnT) (AAR92474) is an enzyme that converts blood group i antigen to Initigen. The occurrence of I antigen is associated with development and maturation of erythroid cells. Membrane-bound or soluble forms of IGnT are obtd. by expression of encoding DNA sequences (see AAT16201) in host cells. IGnT is used to study the role of IGnT in development and oncogenesis, to alleviate disorders associated with IGnT underexpression (e.g. haemolytic disease of the newborm, haemolytic anemia and thrombocytopenia), to regulate IGnT expression, and in detection and diagnostic applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; Column 31-34; 29pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents human beta-1.6-N-acetylglucosaminyltransferase, the I-branching enzyme (IGnT). The protein sequence has a type II transmembrane topology that consists of a short amino terminal cytoplasmic sequence, a signal-anchor sequence followed by a short stem region and a large carboxyl terminal catalytic domain. The protein shows some homology to core 2-beta-1.1-N-acetylglucosaminyltransferase (2GnT). The nucleic acid sequence is used for producing IGnT polypeptides, which can be used to treat disorders arising from under expression of IGnT, e.g. increased to treat disorders arising from under expression such as neonatal susceptibility to type-II hypersensitivity reactions such as neonatal susceptibility to type-II hypersensitivity reactions such as neonatal susceptibility to type-II mypersensitivity reactions and thromborytopenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid sequences and their complementary sequences - useful for producing fragment of recombinant human I-branching -1,6-N-acetyl-glucosaminyl-transferase polypeptide

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        score:
